

The Northern prawn is a hermaphrodite and starts its life as a male; after 4-5 years it turns female. The species is mostly found in areas with soft, muddy sediment where temperatures range from 1-6°C at a depth between 150 and 600 metres. The prawns spawn in the autums and the females carry the eggs until April/May when they hatch.

Product information

Scientific name	<i>Pandalus borealis</i>
Origin	North West Atlantic
Composition	60% shrimp and 40% brine
Size	100-200 pcs/lb; 200-300 pcs/lb
Treatment	Cooked and peeled
Storage	0-4°C
Shelf life	42 days from production
Use	As ingredient and/or topping for salads, in pasta or rice dishes or as pizza topping
Preparation	Ready to eat after draining

Packaging information

Packaging CU	Total weight: 1,500g, drained weight: 900g
EAN code	See attachment
Packaging MC	6 x 900g
SAP mat.nr.	See attachment
Brand options	Heiploeg
Cartons/Europallet	72 (8 layers x 9 plastic trays in shrink-wrap)
Languages on pack	See attachment

Heiploeg is a member of BSCI
